

**California-Registered Water Treatment Devices
for Nitrate Reduction as of May 4, 2016.**

- Generally acceptable for treatment of nitrates at levels of less than of no more than 108 mg/l of nitrate (measured as NO₃)
- Water supply pressure of at least 40 psi is required for effective operation.
- Regular testing of the treated water by a State-certified testing laboratory is recommended to verify performance
- Some manufacturers provide a home test kit that can also be used to evaluate the performance. However, periodic laboratory testing is needed to be sure that nitrate is being effectively reduced.
